Pumpelement DMF-A

- for GMF, PMW, GMA, GMZ
- adjustable

A = Connector

Thread	Pipe AD	Order no.
M12x1,5	6	110.070-64
M14x1,5	8	110.080-64
M16x1,5	10	110.090-64
7/16-20 UNF-2A	1/4"	110.102-64
1/2-20 UNF-2A	5/16"	110.103-64
9/16-18 UNF-2A	3/8"	110.104-64
M16x1,5	8S ¹⁾	110.088-64
9/16 UNF	8T ²⁾	110.095-64

¹⁾ Heavy series

²⁾ Triple Lok 6 JIC 37° without cap nut

B = Sieve

Mesh width: 400 µm
Material: 1.4301
Order no.: 913.300-21

C = Tolerance quality marking

(no marking in case of fit quality I)

D = red ring for denoting

the element with piston ø8

Minimum delivery volume at the maximum adjustment:

Piston-ø6: 0,08 cm³
Piston-ø8: 0,15 cm³

Pump elements for GMG see spare parts E0793 and E0704.

E = Tightening torque for pump element 30 Nm

F = Tightening torque for locking screw/pressure control valve/manometer connector 25 Nm

Pump elements assembly:

When fitting another pump element into the reciprocating pump, please proceed as shown in the sketch beside: With the delivery piston being approximately pulled out half, insert the pump element diagonally upward into the casing's reception hole. Insertion and operation will be easier when the hole that serves to accommodate the delivery piston is filled with grease. Do not put the pump element into horizontal position and screw in, unless the delivery piston's head touches the pressure ring and ratches into the latter's groove. When demounting, pull the pump element cautiously out of the casing such that the delivery piston will remain within the pump element.

Notes to operation:

Reciprocating pumps must be operated with clean oil or grease from original drums only. If, upon start-up, filling is not made via the filling nipple, the pump, in case of initial filling, has to be filled with gear oil up to the stirrer wing's level. This way, proper deaeration is ensured. The lubricant leads must be cleaned and have no obstructions. They shall not be connected with the lubrication points, unless lubricant comes out free of bubbles. All delivery pipe connections should be checked for leakage.

Pump elements mode of operation:

Suction stroke is accomplished by delivery piston **1** and control piston **2**. In this process, delivery piston **1** is actuated by the eccentric shaft, whilst the spring actuates control piston **2**. The control piston closes pressure hole **3** and is kept in a certain position as determined by the preset delivery volume. The delivery piston moves on, causing a vacuum to be built up in the proportioning space. When the delivery piston has opened suction hole **4**, lubricant starts to be sucked from the reservoir.

In case of **pressure stroke**, delivery piston **1** moves to the left. In this motion, suction hole **4** is closed and control piston **2** displaced by virtue of the lubricant being avail-

able in between the delivery and control pistons until it releases pressure hole **3** and the lubricant is delivered through the delivery piston to the outlet. The pump elements are delivered with maximum delivery volume, i. e. they are set to full stroke.

The **delivery volume** can be reduced to minimum of appr. 25% of the rated one. After having removed lock screw **7**, the stroke is to be changed by means of the enclosed spanner through adjustment nipple **6**. When turning the nipple to the right, delivery volume will decrease. At the adjustment nipple, there is a hexagon against which a spring loaded piston is pressing radially. Thus, any independent change of the deliv-

ery volume will be prevented. At the same time, the latching serves as a measure for setting the delivery volume. Six latches equal one rotation of the adjustment nipple and a reduction of the nominal delivery volume by appr. 33%. Precise setting to a specific delivery volume per stroke must ensue, based on volumetric measurements.

The element having a piston diameter of 8 mm = 0,15 cm³/stroke is marked with a red ring "R".

Accessories:

Pressure control valve:

Order no.	Opening pressure	Depiction	Mounting place	Use
110.566-64	70 bar		After removal of the locking screw at the pump element, the pressure control valve can be screwed in.	To limit max. operating pressure.
110.569-64	80 bar			
110.565-64	100 bar			
110.564-64	150 bar			
110.563-64	250 bar			
110.570-64	350 bar			
110.560-64	400 bar			
110.568-65	preset as per customer's specification: from 50 ... 160 bar			
110.562-65	from 160 ... 250 bar			

Manometer connector:

Order no.	Depiction	Mounting place	Use
110.068-65K		After removal of the locking cap at the pump element, the manometer connector can be screwed in.	To connect a manometer with G 1/4" male thread.

Adjustment spanner:

Order no.	Depiction	Use
110.004-65		After removal of the locking cap at the pump element, the delivery volume of the pump element can be adjusted by using the adjustment spanner (included in scope of delivery = i. e. 1 piece per pump each)

Important information about this data sheet

Reproduction, also in extracts, only permitted with the approval of the firm of EUGEN WOERNER GmbH & Co. KG.

All the information in this data sheet has been examined for correctness with great care. Nevertheless, WOERNER cannot assume any liability for losses or damage resulting directly or indirectly from the application of the information contained in this data sheet.

All products from WOERNER may only be used as intended and corresponding to the information in this data sheet.

For products supplied with operating instructions, the additional directives and information contained in them are to be complied with.

Materials deviating from those mentioned in this data sheet and the technical documents which further apply may only be poured into and processed in the appliances and systems manufactured and supplied by WOERNER by following agreement with and written approval by WOERNER.

The safety and danger information stated in the safety data sheets of the substances used must be taken into account at all costs.

Transportation of gases, liquefied gases, gases under pressure, vapours and liquids, the vapour pressure of which is more than 0,5 bar above normal atmospheric pressure (1013 mbar) at the maximum admissible temperature, of easy inflammable or explosive media as well as transportation of foodstuffs is forbidden.

Information on EU Directive 2011/65/EU (RoHS)

In its controls and switching devices, WOERNER only uses materials which fulfil the criteria of EU Directive 2011/65/EU. To the extent that hexavalent chromium has been used as corrosion protection in the parts which we produce ourselves, it has already been replaced by other environmentally tolerable protective measures.

The mechanical devices supplied by WOERNER are not affected by EU Directive 2011/65/EU.

But as WOERNER is conscious of its responsibility towards the environment, we shall also use materials fulfilling the requirements of the Directive for devices not covered by EU Directive 2011/65/EU as soon as they are generally available and their use is technically possible.
